String inverters aggregate the output of groups of solar panels in a system into "strings", which are then connected to a single, central inverter where electricity is converted from DC to AC electricity. With a string inverter, you can connect multiple "strings" of panels to the same central inverter, allowing some flexibility with your solar panel system design.

2. Micro-Inverters Instead of using a single inverter for an entire system, each panel has its own micro-inverter usually the panels and micro-inverters are separate components, but they are also available as AC solar ...
