Are solar farms polluting South Georgia's rivers & streams?

Dave Williams is the Bureau Chief of Capitol Beat News Service. Runoff from a growing number of giant solar farms polluting rivers and streams in rural South Georgia is becoming a major concern, an official with the state Environmental Protection Division said Monday.

Why are solar farms being built in Georgia's sandy soil?

Huge solar farms of up to 1,000 acres are being built on the region's sandy soil, which is particularly vulnerable to erosion of sediment caused by runoff from solar panels, James Cooley, the EPD's director of division operations, told members of the Georgia House Rural Development Council meeting in Americus.

How many solar farms are there in Georgia?

While large solar farms tend to stand out because they're often located near busy highways, they take up only a tiny percentage of Georgia's land mass, PSC Chairwoman Tricia Pridemore said. Currently, there are about 35,000 acres of solar farms spread over 54 square miles, just 0.9% of the land in Georgia, she said.

How much money do solar farms make in Georgia?

Landowners and local municipalities in Georgia are receiving about \$2.9 billion a year in income by leasing land being used for solar farms by Georgia Power alone, said Ryan Sanders, executive director of the Georgia Large-Scale Solar Association.

A sequence of multi-faceted events and initiatives began to unfold in the hopes of adding protections to the area. The archipelagos became protected under the South Georgia and South Sandwich Islands Marine Protected Area (SGSSI-MPA) in 2012, becoming one of the world's largest MPA's, spanning an area of 1.24 million square kilometers.
