

Solar photovoltaic power generation in summer

Does solar radiation affect summer power generation?

Regression equations were derived for PV and PVT. Results show that solar radiation plays a significant role in winter, while multiple factors affect summer power generation. The accuracy of power generation predictions using minimal variables is high, with PVT reaching 91.09%.

Does solar radiation affect PV power generation?

The effects of solar radiation, surface temperature, and relative humidity on the power generated by the PV and PVT systems were observed. The accuracy of the PV power generation prediction formula, substituting the measured variables for the diverse environmental influences during summer, was 97.41 %, whereas the accuracy for PVT was 96 %.

How does weather affect PV power plants?

This result indicates that heatwaves are more likely to have clear and partly cloudy weather conditions, which positively impact the power output of PV power plants. Fewer clouds allow more solar radiation to directly reach the PV panels, thereby increasing the power generation efficiency of the PV power plants. Figure 12.

Can photovoltaic-thermal systems predict power generation?

Photovoltaic-Thermal (PVT) systems are being developed to overcome these limitations. The study discusses predicting power generation in PV and PVT systems. It identifies essential variables, such as solar radiation, relative humidity, and module surface temperature, that influence power generation. Regression equations were derived for PV and PVT.

Do PV energy yields change over time?

Although our results confirm that the average PV energy yields are expected to change to only a minor to moderate extent (under the RCP4.5 scenario), they highlight the fact that these relatively modest changes mask substantial shifts in the number of days with very low PV power outputs.

How to supply stable electricity from solar power plants throughout the year?

To supply stable electricity from solar power plants throughout the year, it is necessary to select an optimal location for the construction of PV power plants with favorable weather conditions and surrounding environment.
