

Can photovoltaic solar power predict electric load?

From the results, photovoltaic solar power plays a key role for predicting electric load.

How is solar power forecasting based on daily electric load and photovoltaic power?

In each benchmark, according to references [ 13, 14 ], the daily electric load and photovoltaic solar power data from 2019 to 2020 are randomly split into a training set and validation set with the percentage of 90% and 10%, respectively, while 2021 is used to test the prediction performance.

Can photovoltaic solar power be integrated into power grid?

Performance analysis including stability and feasibility is conducted. In the grid-connected photovoltaic system (GPVS), due to characteristics of fluctuation and intermittency for photovoltaic solar power, and high randomness for electric load, it is of great difficulty for integrating photovoltaic solar power into power grid.

Does proximity to populated areas affect solar PV power plant site selection?

Proximity to populated areas is considered widely in the literature as a determining factor for the site selection problem for solar PV power plant (Halder et al. 2021). When the solar PV power plant is near populated areas, the energy transmission cost is reduced; however, this may adversely affect the environment.

How to choose a suitable location for solar PV power plants?

The installation of solar PV power plants requires vast land and huge investment. Therefore, it is necessary to select a suitable site to achieve maximum efficiency and low cost. A feasible location of photovoltaic (PV) system must consider certain criteria including land restrictions, access to roads, and transmission lines.

How to choose a solar power plant?

Solar power is massive and limitless. Finding a suitable installation site is required because the solar PV power plant's capital investment is sufficiently large high. Selecting a suitable location for the solar plant is important because it directly measures the amount of energy obtained.

The solar generation is used locally in the prior way, and if the solar generation produces more electricity than the consumption, the surplus will be exported to the power grid. The load curve ...
