

How long does a solar panel loan last?

Usually, this type of solar loan comes with a term of 10-25 years. Getting solar panel financing through your contractor can simplify the process for putting that loan in place. Plus, because the contractor is motivated to have the financing go through (so they can make money off your project), they may lower eligibility requirements.

Does a solar loan have a payback period?

Payback periods with a solar loan will be notably longer than a cash purchase. Leased solar systems allow you to pay a monthly fee to use the system without granting you system ownership. This makes you ineligible for some incentives, but it can also take away the burden of an upfront cost. Leased systems do not really have a payback period.

What is the average solar payback period for EnergySage customers?

The average solar payback period for EnergySage customers is under eight years. Here's what you need to know about how long it's likely to take you to break even on your solar energy investment. Your solar payback period is the time it takes to break even on your initial solar investment.

How long does a solar loan take to pay off?

This means that their solar payback period is actually 0: in their first year they spend less on their solar loan than they would have on their old electric bills (this assumes that they use their 30% federal tax credit to pay down their loan). Once the loan is paid off in 12 years, their savings really accelerate.

How long do solar panels last on EnergySage?

That's the average payback period on EnergySage. At the end of those 7.5 years, your solar panels will have saved you enough money on your electric bill to cover the upfront cost of your system. Year eight in the example is when you technically start saving money, having finally broken even on your investment.

How does a solar loan work?

Like any other loan, a solar loan allows you to borrow money from a lending agency to buy your solar system. It's similar to a cash purchase but increases your system's net cost because of interest rates and dealer fees. Payback periods with a solar loan will be notably longer than a cash purchase.
