Solar power generation parameters and principle diagram

What is a solar cell diagram?

The diagram illustrates the conversion of sunlight into electricity via semiconductors, highlighting the key elements: layers of silicon, metal contacts, anti-reflective coating, and the electric field created by the junction between n-type and p-type silicon. The solar cell diagram showcases the working mechanism of a photovoltaic (PV) cell.

What are the parameters of a solar cell?

The solar cell parameters are as follows; Short circuit currentis the maximum current produced by the solar cell, it is measured in ampere (A) or milli-ampere (mA). As can be seen from table 1 and figure 2 that the open-circuit voltage is zero when the cell is producing maximum current (ISC = 0.65 A).

What factors govern the electricity generated by a solar cell?

Various factors govern the electricity generated by a solar cell such as; The intensity of the light: Higher sunlight falling on the cell, more is the electricity generated by the cell. Cell Area: By increasing the area of the cell, the generated current by the cell also increases.

How solar energy is generated?

The PV technology convert visible spectrum to electricity and thermal collectors use both infrared and visible spectrum for energy generation. So the energy generation from solar radiation can be in the form of electrical energy or thermal Energy. The various conversion paths of solar energy is described in the Fig.2

What is the working principle of solar cells?

All the aspects presented in this chapter will be discussed in greater detail in the following chapters. The working principle of solar cells is based on the photovoltaic effect, i.e. the generation of a potential difference at the junction of two different materials in response to electromag-netic radiation.

What are the performance parameters of a photovoltaic cell?

The following are the most important performance parameters of a photovoltaic cell: The open-circuit voltage for a given material system and standard illumination conditions(see below) can be an indication of cell quality.
