

What is a rooftop pipe support system?

The Unipier Rooftop Pipe Support System from Unistrut offers a full line of supports for conduit, gas and mechanical piping, HVAC ducts, equipment, walkways, and more. These supports work seamlessly with Unistrut channel and fittings, creating the customized solution you need.

How do you install a roof pipe support system?

Simply apply pressure to open the top, place over pipe, and rotate into place. Due to the wide range of materials used in commercial roofing systems, always consult with a design professional for the project to review and design the rooftop pipe support system based on the actual load limitations of the specific roof assembly.

What is a pipe support with strut?

A pipe support with "strut" used to support roof-mounted electrical conduit, solar piping, gas pipes, and other mechanical piping. Unique design absorbs thermal expansion and contraction of pipes thus preventing damage to the roof membrane. Pipes rest on a strut system which is made of hot-dip galvanized steel.

What is a unipier rooftop support system?

Unipier bases are an ideal support for rooftop walkways and crossover systems. The Unipier system provides a safe and durable base to support the entire walkway structure. Unistrut Midwest offers custom-designed solutions for any walkway project. Get started on your Unipier Rooftop Support project today.

How much does a roof support weigh?

The capacity of the conduit supports varies from 115 lbs to 640 lbs. The Unipier rooftop sleeper, RSS4, is the first rooftop support that is white to reflect the sun's UV rays. It is cost-effective, lightweight, and can be cut to length on the job site. The RSS4 weighs only 4 lbs per 4-foot length.

How does Unistrut support a flat roof?

Unistrut Midwest can design and build the proper support for your unique application. An "H" frame constructed of Unistrut and 8-H Base P bases are used to support ductwork or cable trays on flat roofs. The unique design allows a sturdy support without penetrating or causing damage to the roof membrane. Weight distribution is engineered to 2 PSI.
