

In 2022, Romania was selected as 1 of the 10 EU countries that needed the greatest support to modernise their energy systems and improve energy efficiency. This meant Romania was allocated EUR1.4 billion of the EUR4.11 billion to also build eight solar parks and two electric power plants.

According to projections presented at the conference, Romania's total PV capacity could reach 2.5 GW by the end of 2023, almost 6 GW by 2027, and 11.2 GW by 2030. A large part of the expected additions will likely be systems by prosumers as residential solar is attracting huge interest, supported by the Casa Verde programme.
