

Note - this article was originally published on Renewable energy often uses "fuel" which is essentially free. This is particularly the case for wind power which utilises abundant air flows that surround us as well as for marine generation which utilises the motion of the waves and the power of the tides in the sea.

South Africa is no stranger to power surges, which can damage your electrical devices and appliances. Investing in surge protectors is a pro-active move to ensure that both businesses and homeowners as they provide an additional layer of protection against sudden voltage spikes. Surge protectors work by diverting excess electrical energy to ...

The specific topics to be addressed within a country should be determined based on local energy and energy-related priorities, for example future mobility. The communications themselves should address all of the sustainability challenges as they relate to that topic: local air pollution, climate change and energy poverty.
