

Are South Korean companies investing in energy storage systems?

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

Does South Korea have a high energy cost?

South Korea's heavy reliance on fossil fuels has historically led to high electricity costs, as seen during the global energy crisis in 2022. South Korea aims to mitigate these issues by diversifying its energy sources and enhancing energy efficiency across industries.

How will South Korea transform its energy sector?

The country has unveiled an ambitious plan to transform its energy sectors, aiming to generate 70 per cent of its electricity from carbon-free sources by 2038. South Korea aims to have 30 nuclear plants by 2038 and to more than triple its solar and wind power output to 72 GW by 2030.

Will South Korea capture 30 percent of ESS market by 2036?

This was a heavy hit for the energy industry, but developments of safer technology and renewed state support have recently given new life to the domestic ESS market. According to South Korea's "10th Basic Plan for Electricity Supply and Demand," the government aims to capture over 30 percent of the global ESS market by 2036.

Is South Korea a carbon-free country?

South Korea, a country in East Asia, is known for its technological advancements, vibrant economy and strategic role in global trade and innovation. The country has unveiled an ambitious plan to transform its energy sectors, aiming to generate 70 per cent of its electricity from carbon-free sources by 2038.

How much power does South Korea have?

Figure 1: South Korea's installed generation capacity, as of early 2024 (%) Total installed capacity = 144.4 GW. As the country's sole electricity grid company, KEPCO owned and operated about 16,302 km of transmission lines at voltage levels of 154 kV to 765 kV, as of 2023.

Send an email to one or more people with a link to your scenario on the Policy Solutions website. The link will always access the most up-to-date version of this scenario, so if you wish to share multiple scenarios, save each one under its own name.

The first-of-its-kind demonstration for South Korea, which will commence in late 2025, includes 1.8 megawatts (MW) of Bloom's industry leading Solid Oxide Electrolyzer (SOEC) technology to develop green
