

# Special water tank for solar thermal storage installation

What is a natural solar water based thermal storage system?

Natural solar water-based thermal storage systems While water tankscomprise a large portion of solar storage systems,the heat storage can also take place in non-artificial structures. Most of these natural storage containers are located underground. 4.1.

What are spp solar water tanks?

The SPP Solar Water Tanks are designed for various types of solar thermal applications. These solar tanks are most often used in solar hot water heating systems,such as for domestic hot water.

What is a solar water tank used for?

The water tank that acts as a storage system in a solar water heater is used as a back-up system for the solar air collector. Generally,a field of solar collectors is used to respond to thermal energy needs expressed by a consumer for a given purpose (heating,drying,etc.).

How does a solar storage tank work?

When the sun is shining,the water will be heatedin the solar storage tank for later use,most commonly in the evening. Most solar thermal tanks contain a heat exchanger to separate the potable water from the solar heating solution (Water/Glycol) and have a great insulation value that can retain the heat for day.

What types of solar tanks are available?

Solar Panels Plus offers a wide range of solar tanks for all types of applications. These solar tanks are available for hot water storage,hot water heating systems,commercial,and industrial applications. These solar storage tanks are available in pressurized,non-pressurized (atmospheric),and in a variety of capacities and sizes.

What is the Rated heat loss of a solarstor tank?

The SolarStor tank has a rated heat loss of less than .8 degrees F/Hour! This thermal tank is suitable for all forms of solar heating systems including domestic hot water,solar home heating,solar pool heating and hot tubs! With this tank you can easily expand your solar heating system at any time without new equipment!
