

We are harnessing the transformational power of digital technologies to accelerate the transition to a low-carbon society. Context The transition to zero net emissions by 2050 has massive ...

Voith Hydro Holding was selected as the turbine supplier for the hydro power project. The hydro power project consists of 1 turbine. Voith Hydro Holding was selected as the turbine supplier for the hydro power project. The company provided 2 units of francis turbines. For more details on Z"Mut, buy the profile here.

Innertkirchen is a 473.7MW hydro power project. It is located in Bern, Switzerland. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in multiple phases. The project construction commenced in 1940 and subsequently entered into commercial operation in 1942.

Etzelwerk Altendorf is a 135MW hydro power project. It is located on Altendorf Limmat river/basin in Switzerland. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in a single phase.

This study provides a consistent -comparison of the presentday energy performance of power generation technologies, which can be considered relevant for the Swiss context. The analysis ...

Mottec is a 69MW hydro power project. It is located in Valais, Switzerland. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in a single phase. Post completion of construction, the project got commissioned in 1959. Buy the profile here.

Laufenburg - Switzerland is a 53MW hydro power project. It is located on Rhine river/basin in Aargau, Switzerland. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in ...

We are harnessing the transformational power of digital technologies to accelerate the transition to a low-carbon society. Context The transition to zero net emissions by 2050 has massive impacts on the entire energy system.

Rheinfelden Switzerland is a 50MW hydro power project. It is located on Rhine river/basin in Basel-Stadt, Switzerland. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in ...

Description The project was developed by Grande Dixence. Alpiq Holding, Axpo Power, BKW Energie and Industrielle Werke Basel are currently owning the project having ownership stake of 60%, 13.33%, 13.33%

and 13.33% respectively. The gross head and net head of the project are 1,883m and 1,869m respectively. Bieudron underwent through rehabilitation ...

Our recent study investigates how Switzerland's integrated energy system could use power-to-gas, gas-to-power, and other flexible resources to balance seasonal mismatches while complying with national energy policies for sustainability and energy security.

In Switzerland, the main focus in the renewable energy sector is on conversion into electricity and district heating. Hydroelectric power has been Switzerland's greatest source of renewable energy for decades, used above all to produce electricity.

Limmern is a 1,000MW hydro power project. It is located on Muttsee Lake and Limmernsee Lake river/basin in Glarus, Switzerland. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in a single phase.

The following article outlines four potential pathways that could enable Switzerland to meet its increasing power-supply needs by focusing on the role of the electric grid, factoring in the economic and regulatory feasibility and ...

The following article outlines four potential pathways that could enable Switzerland to meet its increasing power-supply needs by focusing on the role of the electric grid, factoring in the economic and regulatory feasibility and the time required for implementation.

This study provides a consistent -comparison of the presentday energy performance of power generation technologies, which can be considered relevant for the Swiss context. The analysis covers both renewable power generation technologies such as ...
