

Will ECOWAS build a solar power station in Gambia?

In October 2022, a meeting was convened in Banjul, Gambia's capital city, in which representatives of the member countries of ECOWAS validated the feasibility study for the construction of the 150 MW Soma Solar Power Station, in Soma, Gambia.

Will a new solar plant increase energy demand in the Gambia?

Energy demand in The Gambia has increased by 5.5% per year in recent years and today's connection of the new 23 MWp solar plant to the national energy grid will significantly increase Gambia's current generation capacity of 98 MW and enable electrification of rural areas. A strong commitment

Why is a solar power plant important in the Gambia?

H.E. Corrado Pampaloni, Ambassador of the European Union to The Gambia "This power plant is part of the "Gambia Electricity Restoration and Modernization Project" and it is particularly important for the achievement of a swift transition towards solar power and clean energy supply across the country.

Will the Gambia build a solar farm in Soma?

The Gambia will build a 150 MW solar farm near the planned 250kV/30kV substation in Soma, to either upload power to stabilize the Gambian grid or for injection into the West African Power Pool or both, depending on conditions.

How can energy infrastructure be improved in the Gambia?

Improving energy infrastructure is consistent with the EU "Agenda for Change" policy, which identifies energy as an essential driver of economic growth. The project will contribute to reducing the existing electricity supply gap in The Gambia using sustainable solar energy resources.

How many megawatts does Gambia generate?

As of January 2019, Gambia had total installed generating capacity of approximately 139 megawatts. Of this, the Gambia National Water and Electricity Company (NAWEC), generated 102 megawatts and an independent power producer generated approximately 26 megawatts, at Brikama, an urban centre, south of Banjul.

The Government of the Gambia, through the Ministry of Petroleum and Energy (MoPE) and the National Water and Electricity Company (NAWEC), has received the World Bank's support to develop a 50 MWp Regional Solar ...

The World Bank is financing the preparation of the Regional Solar Park of The Gambia (P504421) for the implementation of a competitive bidding program to mobilize private investments for the development of a (50MW Solar PV + 18MWh BESS) in Soma, The Gambia.

The project will consist of three components: (1) a grid-connected photovoltaic (PV) power plant with a total installed capacity of 10 MW including an associated battery energy storage station (BESS), (2) a number of off-grid PV and BESS units for rural health clinics, ...

Energy demand in The Gambia has increased by 5.5% per year in recent years and today's connection of the new 23 MWp solar plant to the national energy grid will significantly increase Gambia's current generation ...

oIncrease generation (solar + BESS) oImprove reliability of the network oInstall a control system for generation, transmission and distribution oPrepare the system for the connection with WAPP line oIncrease collection rate by installing prepayment meters oSupport the reform in the national utility (NAWEC) 3 Solar plant +BESS

The National Water and Electricity Company (NAWEC) in Gambia has launched a tender seeking developers for a 50 MW solar PV project with a battery energy storage project (BESS) under phase I. It can be scaled up to a total of 150 MW with storage.

The objective of the assignment is to assess the technical viability of constructing solar PV power generation in three potential modalities: (i) PV stand-alone power plant with a total installed capacity between 10 and 30 MWp including an associated BESS; (ii) hybridization of existing plants with PV power plants with BESS; and (iii) off grid ...

Energy demand in The Gambia has increased by 5.5% per year in recent years and today's connection of the new 23 MWp solar plant to the national energy grid will significantly increase Gambia's current generation capacity of 98 MW and enable electrification of rural areas.

The project will consist of three components: (1) a grid-connected photovoltaic (PV) power plant with a total installed capacity of 10 MW including an associated battery energy storage station (BESS), (2) a number of off-grid PV and BESS units for rural health clinics, secondary schools and food manufacturing and storage facilities and (3) ...

SummaryLocationOverviewDevelopersConstruction costs, funding, and commissioningSee alsoExternal linksThe Jambur Solar Power Station (JSPS), is an operational 23 MW (31,000 hp) solar power plant in Gambia. The power station began commercial operations in March 2024. It is owned and was developed by the government of Gambia, with funding from the European Union, the European Investment Bank and the World Bank. The power generated here is integrated into the Gambian national electricity grid, through the National Water and Electricity Company network.

The Jambur Solar Power Station (JSPS), is an operational 23 MW (31,000 hp) solar power plant in Gambia. The power station began commercial operations in March 2024. It is owned and was developed by the government of Gambia, with funding from the European Union, the European Investment Bank and the World

Bank.

The Soma Solar Power Station is a planned 150 megawatts solar power plant in Gambia. The two lead developers of this renewable energy infrastructure are the Government of Gambia and the Economic Community of West African States (ECOWAS).
