

The United States imports solar power from China

What percentage of US solar imports are from China?

The area chart depicts the market share of U.S. solar imports by country. The year 2018 is highlighted, with the text explaining that 0.9% of U.S. solar imports are from China. In 2022, the Biden administration extended the Trump-era solar tariffs on all solar imports and two years later increased the tariff on Chinese solar goods specifically.

Does China still import solar?

China still supplied 38% of imported solar goods in 2014 after two years of tariffs. The U.S. stepped up duties on those products by 33% and set new tariffs on Taiwanese cells after some Chinese producers pivoted to source from there. The area chart depicts the market share of U.S. solar imports by country.

Does the US import solar panels?

The U.S. imports most of its solar panels. A new ruling may make that more expensive. Workers install solar panels on a rooftop at AltaSea's research and development facility at the Port of Los Angeles on April 21, 2023.

Why did the US impose import duties on solar panels?

REUTERS/Nathan Frandino/File Photo Purchase Licensing Rights Aug 18 (Reuters) - The United States on Friday finalized a decision to impose import duties on solar panel makers who finished their products in Southeast Asian nations to avoid tariffs on Chinese-made goods, according to a senior Commerce Department official.

Which countries import the most solar panels?

Those countries -- Vietnam, Malaysia, Thailand, and Cambodia -- are responsible for nearly three-quarters of solar modules imported to the United States.

Where do US solar imports come from?

U.S. solar imports from those three countries plus Cambodia, another major export hub for Chinese firms, hit a record \$12 billion in 2023, roughly four-fifths of all solar imports and four times 2019 levels. Shipments from China are now negligible. The area chart depicts the market share of U.S. solar imports by country.
