

The purpose of installing photovoltaic panels on the island

How does an islanding solar inverter work?

Your islanding solar inverter works independently from the power grid. If there's a storm or other event that knocks out the main power grid, your solar power system will continue running and providing power to your home. We mention this because many people mistake going solar with going off-grid, but that's typically not the case.

What is solar PV on a resort island?

Solar PV on a resort island a clear sustainability message to your clients and partners Swimsol provides a unique solution to achieve desired solar production capacity - floating solar powerplant at sea (offshore solar). SolarSea produces 5-10% more energy due to natural cooling at sea.

What is rooftop solar for Islands?

Rooftop solar for islands Swimsol provides affordable and durable marine floating & rooftop solar PV systems for the tropics, where land space is limited. We make solar energy a hassle-free experience by handling all the tech & maintenance. We work with ultra-luxury resorts and small businesses alike - always aiming to provide great service.

Why do solar panels and inverters need anti-islanding?

Solar panels and inverters are expensive investments. Islanding can cause voltage spikes and other electrical anomalies. These impacts can damage your solar equipment severely. Anti-islanding prevents such situations by discontinuing power production during islanding. It keeps your solar systems from experiencing harmful electrical issues.

Why should you install solar PV systems in St Lucia?

At the forefront of this revolution is Eco Carib, a leading solar PV business dedicated to harnessing the power of the sun for a sustainable and eco-friendly future. In this blog post, we explore the myriad advantages of installing solar PV systems in St. Lucia with Eco Carib, paving the way for a cleaner and more energy-efficient island paradise.

Why do solar panels need a solar inverter?

Inverters continuously watch grid voltage and frequency. If they notice the grid is down, they disconnect your solar system to stop power flow. This quick action prevents the risk of islanding. It ensures your solar panels do not send power when it's not safe.
