## SOLAR PRO. The ratio of solar energy to energy storage

How do you determine the capacity of wind and solar energy?

On the planning level, the capacity of wind and solar that is going to be installed is determined by the renewable investment amount and the W/S ratioas formulated by equations (1), (5). The energy and power capacity of storages are decided by the storage investment amount and the E/P ratio as formulated by equations (2), (8).

How long should solar energy storage be?

This relationship suggests that 6-to-10-hstorage is the ideal duration to support the diurnal cycles of solar power. In wind-dominant scenarios,6-to-10-h storage is replaced by 10-to-20-h storage that appears better suited to support wind-dominant grids.

How does energy storage affect the selling price of solar energy?

The average selling price without storage is lower for wind than solar, but as the energy storage increases in size (per unit rated power of solar or wind generation), the pricing distribution and mean selling price become increasingly similar across the two energy resources (Supplementary Figs 6-8).

Do storage technologies add value to solar and wind energy?

Some storage technologies today are shown to add value to solar and wind energy, but cost reduction is needed to reach widespread profitability.

Do energy storage technologies provide flexibility in energy systems with renewable sources? Storage technologies are a promising optionto provide the power system with the flexibility required when intermittent renewables are present in the electricity generation mix. This paper focuses on the role of electricity storage in energy systems with high shares of renewable sources.

Why do energy systems need more storage facilities?

Future energy systems require more storage facilities to balance the higher share of intermittent renewables in the upcoming power generation mix(Benato and Stoppato,2018),especially as the demand for electric power could push capacity to 7200 GW by 2040 (International Energy Agency,2014).
