

Should you install solar panels on your roof?

Installing solar panels on your roof can both save you energy costs and reduce your home's environmental impact. Even though there are some DIY solar panel options, installing them is a highly complex project, and you'll still need assistance from an experienced professional.

How do you install a solar system?

Once the solar panels are installed, the system needs to be activated. This involves interconnecting the solar panels, installing the inverter, and commissioning the system. During this step, installers should note that as long as the solar panels are receiving sunlight, they have an open circuit voltage.

Where should solar panels be installed?

For most residential installations, rooftops are the preferred location for solar panels. Ensure your roof is structurally sound and faces the right direction to maximize sun exposure. South-facing roofs typically receive the most sunlight. If your roof is not suitable for solar panels, consider ground-mounted options.

Should you DIY a solar panel installation?

DIYing a solar panel installation is a great way to reduce costs and better understand how your new solar system works from the inside out. Plus, DIY solar projects are just plain fun! This blog will give you the information you need to take your solar panel installation from start to finish.

Can you install ground-mounted solar panels on a pitched roof?

You can install ground-mounted solar panels, though you'll again need more space than you would if you installed panels on a pitched roof. This is because you'll need to space out your panels so they don't cast shade on each other, just like on a flat roof.

Do I need a permit to install a solar panel?

Check with your local authorities regarding necessary permits and regulations for solar panel installation. Regulations might cover aspects such as system size, grid connection, and safety requirements. There are three main types of solar panel systems: grid-tied, off-grid, and hybrid.
