

What is a medium outdoor distribution cabinet?

Medium outdoor fiber distribution cabinets are often deployed as distribution hubs in medium or large neighborhoods, containing splitters for centralized topologies. The cabinet is configured with centralized splitting. Microducts are laid individually from terminal closures to each individual home.

What is a large outdoor distribution cabinet?

Large outdoor fiber distribution cabinets are generally deployed as distribution hubs for medium and large neighborhoods, containing splitters for centralized topologies. They are also employed as colocation cabinets, allowing the connection of any home within a medium-size neighborhood to different service providers.

Are CommScope outdoor distribution cabinets FTTH compatible?

CommScope outdoor fiber distribution cabinets are uniquely adaptable to almost any FTTH need, and we're eager to work with you to build effective solutions, both for today and for the future.

What is a small outdoor fiber distribution cabinet?

Small outdoor fiber distribution cabinets are often used as the last distribution hub, connecting the network directly to homes with microducts or drop cables. These cabinets are also used as the secondary node in blown fiber access deployments. Drops are installed when the customer requests service.

How do distribution cabinets work?

Lines out from the cabinet are point-to-point to each customer, through closures and terminal boxes. Large outdoor fiber distribution cabinets are generally deployed as distribution hubs for medium and large neighborhoods, containing splitters for centralized topologies.
