Island Power produces green hydrogen from clean energy and water. We work with solutions for either injection in the natural gas pipelines, or as green ammonia, for usage in agriculture and chemical areas.

Today, the U.S. Department of Energy (DOE) welcomed 25 new coastal, remote, and island communities to the Energy Transitions Initiative Partnership Project (ETIPP) as the technical assistance program's fourth cohort.

One of the main benefits of electrical energy battery storage is the ability to store excess energy generated by renewable energy sources such as solar or wind power. By storing this excess energy, islands and resorts can reduce their reliance on fossil fuel-based power plants, resulting in lower operating costs and reduced carbon emissions.

Islands face unique challenges to ensure secure and cost-effective energy supply. Isolated from typical supply lines, they require innovative solutions to reduce electricity costs, improve grid reliability, respond to urgent demands for resilient power systems and accelerate renewable energy deployment.

Island Power Solutions was created to provide affordable and clean power to nation islands. We work with renewable energy production, management of waste residues and water treatment solutions, helping islands to reach carbon neutrality.
