

What challenges do the Pacific Islands face?

The Pacific islands face unique energy challenges including a limited supply of domestic fossil fuel resources. These constraints have led to a historical dependence on imported fuels for power generation, and a corresponding vulnerability to fluctuating energy prices.

How will modernization impact the Pacific Islands' energy sector?

In addition to increased access to electricity and more resilient infrastructure, some locales are targeting as much as 100% renewables for their energy mix. The modernization of the Pacific Islands' energy sector promises to strengthen local economies and enhance the quality of life for residents.

How many PICTs have energy policies?

Pacific Island countries and territories (PICTs) are at different stages regarding energy security and resilience. Fourteen PICTs have policies or roadmaps, some of which require updating. Six PICTs--the Cook Islands, Federated States of Micronesia, Samoa, the Republic of the Marshall Islands (RMI), and Tonga--have energy acts.

What is Block Island's energy plan?

Block Island, Rhode Island is looking to identify renewable energy sources that can be used to generate electricity on the island and reduce reliance on imported electricity and fuels. The community will engage in energy planning to shore up its resilience, particularly in the face of sea-level rise.

Why are some islands reliant on fossil fuels?

Like many islands around the globe, the featured islands are heavily reliant on fossil fuels for electricity generation, leaving them vulnerable to global oil price fluctuations that directly impact the cost of electricity.

When was the United States Minor Outlying Islands created?

ISO introduced the term "United States Minor Outlying Islands" in 1986. From 1974 until 1986, five of the islands (Baker Island, Howland Island, Jarvis Island, Palmyra Atoll, and Kingman Reef) were grouped under the term United States Miscellaneous Pacific Islands, with ISO 3166 code PU.

The viability of solar power is limited on smaller islands due to land scarcity. However, an uptake of rooftop solar and/or offshore wind could be feasible. Wave energy is still out of reach for small island nations; ocean thermal energy conversion (OTEC) is a potential power source for some islands, but the economics are still risky.
