

United States simple solar system for home

What is a home solar system?

A home solar system, also known as residential solar, is a system that converts sunlight into usable energy for residential properties. It comprises solar panels, inverter (s), and a battery (optional) and is also connected to the main power grid. Solar panels are the heart of a home solar system and function by absorbing available sunlight.

How does a home solar system work?

Let's look at how each one works. Grid-tied systems are the most common type of home solar system. They are connected to the local power grid and allow homeowners to use any solar energy they produce while using the grid's electricity as needed. A grid-tied system also lets homeowners take advantage of net metering programs.

Are home solar systems suitable for different climates?

These advances have made home solar systems suitable for various climates. When deciding to switch to a solar power system for a home, there are three types of systems homeowners can choose from: grid-tied, off-grid, and hybrid. Let's look at how each one works. Grid-tied systems are the most common type of home solar system.

Are home solar systems a good investment?

One of the biggest draws of home solar systems is the potential for long-term cost savings. As homeowners produce their own energy to power their homes, they reduce their reliance on local grid electricity. And the less they use the grid, the lower their utility bills could be.

Can you buy a solar energy system with a mortgage?

New homeowners can add solar as part of their mortgage with loans available through the Federal Housing Administration Fannie Mae, which allow borrowers to include financing for home improvements in the home's purchase price. Buying a solar energy system makes you eligible for the Solar Investment Tax Credit, or ITC.

Who owns a solar energy system?

The system can be on- or off-site and may be owned by utilities, a solar developer, non-profit entities, or multiple community members. If you lease a solar energy system, you are able to use the power it produces, but someone else--a third party--owns the PV system equipment. The consumer then pays to lease the equipment.
