Can selective grinding remove resin from glass in silicon-based PV panels?

Selective grinding during the initial stage of grinding is effective for removing resin from glass in silicon-based PV panels. Many previous studies on the separation of glass from resin have investigated the applicability of chemical processes, but we achieved separation by brief physical processes.

Can a PV panel be used as a raw material?

The selectivity was high at a high rotation speed and during the initial stage of grinding. We found that 97% of the glass in a PV panel can be recovered with less than 1% C contamination for particles smaller than 5.6mm by grinding at 2500rpm for 5min. The resulting glass particles are suitable for use as raw material for glass fiber.

What is the difference between mechanical and thermal treatment of photovoltaic panels?

The mechanical methods include crushing, attrition, and vibration for glass separation and is the less polluting method compared to the other two [10,11,12]. Thermal treatment is mainly used to remove the polymeric fraction of the photovoltaic panel, i.e., EVA resin and backsheet materials [13,14].

What are the different types of photovoltaic (PV) applications?

There are many Photovoltaic (PV) applications, including Building Integrated Photovoltaics (BIPV), buildings with weight limitations, buildings with curved roof surfaces, or other outdoor portable applications, where flexible or conformable PV products would be beneficial.

What is a silicon based PV panel?

Most silicon-based PV panels have a three-layer structure consisting of flat glass, a cell sealed with ethylene-vinyl acetate (EVA), and a back-sheet made of a multi-layer film comprising polyvinyl fluoride (PVF), polyethylene terephthalate (PET), polyethylene (PE), and other components.

What are the physical processes of PV panels?

Physical processes involve mechanical treatments applied to the PV panel, such as shredding and milling (B. Sorensen., 2017) (Granata et al., 2014) (M. Ito, 2016) (Azeumo et al., 2019; Xuefeng et al., 2021).

Nature Reviews Materials - Nearly all types of solar photovoltaic cells and technologies have developed dramatically, especially in the past 5 years. Here, we critically ...

While several different module technologies are in use, crystalline silicon (c-Si) modules currently dominate the market. An increase in market share for other technologies (e.g. copper indium gallium selenide ...
