

What color is the structural adhesive for photovoltaic panels

What is a photovoltaic (PV) panel?

A photovoltaic (PV) panel is a device that generates electricity from sunlight. It is made up of individual solar cells. Each solar cell generates a small amount of electricity. When you connect many solar cells together, a solar panel is created that generates a substantial amount of electricity.

Can solar panels be installed on a metal roof?

If you're installing solar panel arrays on a metal or concrete roof, eliminate the need to drill holes. Our adhesives securely attach photovoltaic solar panel mounting rails to the rooftop without damaging the roof's structural integrity or letting elements such as rain and bacteria seep in through these holes. Have a Question?

How do solar panel rails work?

Our adhesives secure solar panel rails to the roof eliminating the need to drill holes, which can potentially let in moisture or bacteria. Our adhesives are very flexible - achieving 190% elongation - enabling the rail to absorb thrust and shock produced by high wind speeds.
