

Can customers buy a share in a wind farm?

Ripple Energy is offering customers the chance to buy a share of a wind farm in return for receiving the electricity it produces. They aim to sign up 2,000 households in Britain to crowdfund the construction of the turbine, making it the first customer-owned wind farm in the UK.

Does Eversource own a wind farm?

Eversource, which has 4.4 million electric, natural gas and water utility customers in Connecticut, Massachusetts and New Hampshire, said in January it intends to divest its ownership stake in three wind projects it jointly owned with Orsted. The same month, it sold its stake in the 880 MW offshore wind farm Sunrise Wind to Orsted.

Who buys the electricity from a wind farm?

Your share of the wind farm's generation will be sold to Ripple's supply partners, Co-op Energy and Octopus Energy⁹. Octopus buys the electricity at the wind farm's operating cost rather than the market price for electricity. $(\text{market electricity price} - \text{wind farm operating cost}) \times \text{your share of generation} = \text{your saving}$

Who owns the wind farm?

The wind farm is owned entirely by the customers. Ripple Energy is the managing agent for the co-op, managing the relationships with all the necessary companies to build and operate the wind farm on their behalf.

How profitable is a wind farm?

The profitability of a wind farm depends directly upon reducing uncertainty when wind resources are being assessed and when wind turbines are being fine-tuned. Project risks vary from site to site, depending upon size, site complexity, and whether the wind farm is onshore or offshore.

Is investing in a wind farm profitable?

Ripple Energy's wind farm offers a potential saving for investors, as the cost of running the wind farm is currently lower than the market price for electricity. Customers' share of the wind farm will create a saving, which is calculated monthly and deducted from their bill by Co-op Energy. However, all investments carry a risk.

Most wind lease agreement escalators do not align with inflation rates, which is why many landowners sell their wind lease payments for a lump sum up front. Scope of Land Subject to the Agreement When negotiating ...
