

Are Cyclon batteries nonspillable?

The Department of Transportation (DOT) has classified all CYCLON batteries as "nonspillable wet electric storage batteries." Having been tested and found in compliance with section 173.159 (d) of the 49 CFR, subchapter 173.159, CYCLON batteries are exempt and unregulated regarding shipping requirements of DOT 173.159. As a result,

Which EnerSys® Cyclon battery is best?

At high-rate and pulse discharges, EnerSys® CYCLON batteries offer the best performance value when compared with competitive product in applications at less than 100 minutes of discharge. Cycle life - Compared to competitive lead products (offering up to 200 full cycles), pure lead batteries provide 50% to 200% greater full cycle capability.

Are Cyclon batteries safe?

Constructed of high-purity materials, CYCLON® batteries are engineered to provide longer service life, high reliability and with fewer replacements. Safe enough for installations in offices or hospitals. From general purpose to extremely demanding applications, CYCLON batteries offer better performance and lower long-term cost of ownership.

How long do Cyclon batteries last?

CYCLON® batteries can be recharged in under an hour, and boasts a design life of ten years for single cell products and up to eight years for monobloc products. CYCLON® batteries perform remarkably well in extreme applications and temperatures (up to twice the capacity at -20°C) - and are safe enough for installations in offices or hospitals.

Are Cyclon batteries regulated?

Having been tested and found in compliance with section 173.159 (d) of the 49 CFR, subchapter 173.159, CYCLON batteries are exempt and unregulated regarding shipping requirements of DOT 173.159. As a result, CYCLON® batteries do not have an assigned UN number, nor do they require additional DOT hazard-communication labeling or placarding.

What is a Cyclon battery?

Made from 99.99% pure lead, CYCLON® battery plates are extremely thin, so they offer more surface area than conventional batteries - and far more power. High-purity acid is absorbed right into the Absorbed Glass Mat (AGM) plate separators, so the CYCLON battery provides leak-proof operation in any position.

CYCLON battery Single Cells and Monoblocs have a shelf life more than two times that of conventional lead batteries. To assure maximum reliability, EnerSys recommends that all stored cells/batteries be recharged (boost charged) once ...

The ambition is to develop large scale hydrogen production on Åland integrated with gigawatt scale offshore wind in Åland waters for use both on Åland and in the wider European region, thereby supporting Åland"s and EU ...

®At high-rate and pulse discharges, EnerSys CYCLON batteries offer the best performance value when compared with competitive product in applications at less than 100 minutes of discharge. 2. Cycle life - Compared to competitive lead products (offering up to 200 full cycles), pure lead batteries provide
