

Who is Safran electrical & power?

It is a key player in the equipment electrification & in the electric and hybrid propulsion sector. Mastering the on-board energy system, the company designs and provides modular, innovative and optimized architectures and solutions. Safran Electrical & Power is a developer of both primary generation systems and auxiliary generation systems.

Where in France will a solar array be installed?

The system at Safran Aircraft Engines in Evry-Corbeil (near Paris) will be one of the largest self-consumption PV arrays on any industrial site in France. A second phase will later be launched to install solar arrays at more than 40 Safran facilities in France.

How can Safran decarbonize aviation?

Making planes electric and hybrid represents one of the key axes of Safran's strategy for decarbonizing aviation. Combined with the development of a breakthrough propulsion architecture, the use of more sustainable air fuels and lighter equipment, they should enable carbon-neutral aviation by 2050.

Farnborough International Airshow - July 23, 2024 Safran Electrical & Power has been selected by Boeing to provide the electrical power generation system for the X-66 flight demonstrator, part of NASA's Sustainable Flight Demonstrator project. Safran Electrical & Power will also support ground and flight tests, slated to start in 2028. The Sustainable Flight ...

The GENeUSGRID(TM) power management system manages the energy system to meet the needs of full electric or hybrid propulsion motors. It manages a combination of high-voltage generators and batteries while ...

Electrical hybridization of aircraft and propulsion systems is a key pillar of Safran's decarbonization strategy.. That's why Safran Electrical & Power has developed a very high power density motor-generator - GENeUSTM 300 - which is intended to hybridize the propulsion systems of the future. At the end of its first test campaign, this equipment ...

The two partners intend to combine their respective areas of expertise and excellence to offer the most competitive components on the market for an optimized electric propulsion system: Safran Electrical & Power has unequalled expertise in electric motors as well as power distribution, while EP Systems provides cutting-edge energy storage technologies.

Safran Electrical & Power is inventing the ePower electrical systems, which contribute to aircraft decarbonization. It now finds itself at a turning point in its history, and must face up to a number of ambitious challenges. We speak to Hervé Blanc, Executive Vice President & General Manager of the Power

division.

aircraft, the Cassio wiring will carry power levels twice as high. Safran Electrical & Power will provide its technical expertise to support VoltAero in obtaining the SOF (Safety of Flight) validation - a prerequisite for carrying out the Cassio 330's certification flight tests. This contract extends a partnership signed in 2020 involving ...

[? Press release] Safran launches solar energy production at its France sites to reduce their carbon footprint Safran, working with RESERVOIR SUN and IDEX will generate part of the energy it...

Safran Electrical & Power is a developer of both primary generation systems and auxiliary generation systems. The company has also created GENeUS(TM), a family of smart generators that integrate active power management, making them ...

Safran, working with Réservoir Sun and Idex, will generate part of the energy it uses by installing solar panels at 17 of its sites in France. With a total capacity of almost 50 MWp,[1] the photovoltaic arrays will be installed mainly on parking lot shade structures and will cover a total area of just under 180,000 square meters (1.9 million sq.ft).

The power system is characterized by a strong focus on renewable energy. Annual consumption is around 300 GWh per year. Installed wind power is 62 MW, covering 60% of annual consumption with 180 GWh/year, while solar, mostly rooftop, contributes 15 MW, generating 12 GWh/year (4%).

Safran Electrical & Power propose des services à l'heure de vol, une solution clé en main pour gérer votre budget plus efficacement sur le long terme en fonction de vos prévisions de vols. Ce type de contrat offre de la flexibilité tout en ...

Safran Electrical & Power Headquarter. Headquarters. Parc d'activité d'Andromède 1, rue Louis Blériot 31702 BLAGNAC Cedex France. 43° 39" 14" N, 1° 22" 1" E +33 5 34 28 20 00 ...

Safran Electrical & Power is inventing the ePower electrical systems, which contribute to aircraft decarbonization. It now finds itself at a turning point in its history, and must face up to a number of ambitious challenges.

In combination with innovation, Åland's aspiration is to become a pioneer in green energy in the Nordic countries. Wind power already accounts for 90% of Ålands electricity production. The move toward even greater production of renewable energy through large-scale solar power farms and offshore wind farms is already well underway.

At the heart of the design and production of aeronautical electrical systems, Safran Electrical & Power is an

expert in the entire onboard electrical power chain, and the active representative of Safran in the area of the "more electric" aircraft.

Safran Electrical & Power is a developer of both primary generation systems and auxiliary generation systems. The company has also created GENeUS(TM), a family of smart generators that integrate active power management, making them the ideal power source for ...
